Sr. Front End Developer (Android)
Location: Remote

Description

Gramhal is on a mission to enable 10 million farmers to earn a fair price for their crops by 2025. At Gramhal, we're driven by the passion for improving the lives of farmers, and we do it with innovation, diligence, and compassion. We are breaking down information asymmetry that prevents farmers from getting the best price for their crop. Years of listening to farmers and understanding their problems have led to the development of our platform that gives farmers and buyers access to hyperlocal crop quality and price information. As thousands of users join the platform, the frontend developer will be responsible for rapidly adding new features that are critical for customer success. If you are an app developer excited by the prospect of being in the driver's seat of rapid growth at the early stages of a platform, and you share our vision of creating a valuable product for farmers, we are excited to meet you.

Responsibilities

- Work with other app developers to understand the current architecture and stack
- Collaborate with cross-functional teams to define, design, and ship new features
- Work with outside data sources and API's
- Design, build and maintain high performance, reusable, and reliable Java code
- Fix bugs and performance problems
- Ensure the best performance and user experience of the application
- Develop improved systems to ensure success at scale
- Perform app analytics to ideate product improvements

We are looking for a versatile person who has the mettle to solve one of the biggest problems in India. Gramhal has an exceptional pool of people who proactively take the initiative and lead as intrapreneurs. We undertake rapid iteration to create the best product for farmers; hence you must embrace ambiguity and remain optimistic with a learning mindset.

Skills

- Working in an agile environment
- Android frontend development using Java
- Working knowledge of database and APIs
- Knowledge on user testing and running app analytics
- Publish-subscribe systems and push notifications (e.g., using RabbitMQ)

Great to have
- Familiarity with Android Bluetooth APIs
- Familiarity with python web apps and Firebase
- Familiarity with ARcore and Firebase ML kit
- Knowledge of written and spoken Hindi is a plus

What to expect from us?

- A candid, mindful work culture. We have an emotional intelligence leadership coach, who works with you one on one on your personal and professional goals.
- Competitive remuneration
- Opportunity to build your leadership muscle through a personalized pathway to work in domains beyond software development.
- Opportunity to create an impact in the lives of millions of Indian farmers.
- A well-planned recruitment process that respects your time and efforts.

How to Apply

The selection process will have four rounds. The detail is described on our website. For the first step, all candidates are requested to fill this google form.

Gramhal believes in workforce diversity. We encourage applications from women, the LGBTQ community, minority groups, indigenous groups, and persons with disabilities. All applications will be treated with the strictest confidentiality.
